

Multi-Account Rotation and Copying for NinjaTrader 8 **User Guide • v2.0**

Intelligent multi-account rotation and copying for NinjaTrader 8. Mirror trades across multiple accounts simultaneously or in sequence, with per-account win/loss limits, configurable contract sizing, drag-and-drop queue management, sub-groups, and live session tracking.

IMPORTANT: Use of this software is entirely at the owner's risk. Nothing in this guide constitutes financial or trading advice. See Disclaimer on page 2.

Disclaimer & Terms of Use

USE AT YOUR OWN RISK

Q-My-Trade is provided as a technical automation tool for NinjaTrader 8. By installing or using this software you agree to all terms on this page in full. If you do not agree, do not install or use the software.

No Trading Advice

Nothing in Q-My-Trade, its documentation, or associated materials constitutes financial, investment, or trading advice of any kind. The software does not make trading decisions and has no knowledge of market conditions, risk tolerance, account funding levels, or individual objectives. All trading decisions are made solely by the user.

Use At Your Own Risk

The software is provided "as is" without warranty of any kind. The developer accepts no responsibility for any losses, damages, missed trades, erroneous executions, account violations, or any other adverse outcome arising from use or misuse of the software, whether caused by software defects, connectivity issues, broker behaviour, user error, or any other cause.

Prop Firm & Broker Compliance

It is entirely the user's responsibility to ensure that use of Q-My-Trade complies with the terms and conditions of their prop firm, broker, and any applicable laws or regulations. The developer makes no representation that the software is compliant with any specific firm's rules. Some prop firms prohibit automated trading tools. You must verify compliance before use.

Not A Risk Management System

Win and Loss limits in Q-My-Trade are rotation and copy controls only. They determine whether the rotator or copier moves to the next account or skips an account after a trade closes. They do NOT close open positions, do NOT prevent losses beyond configured thresholds, do NOT interact with broker risk systems, and do NOT constitute capital protection of any kind. You must maintain independent risk controls appropriate to your trading activities.

P&L Accuracy

P&L figures displayed are calculated from account data provided by NinjaTrader 8 and are for informational and rotation-logic purposes only. They should not be relied upon as accurate financial records. Always verify performance through your broker or prop firm's official platform.

P&L Differences Between Accounts

There will inevitably be differences between the P&L of the signal (leader) account and the mirror (follower) accounts. These differences can arise from: market slippage at the time of execution, differences in commission structures, partial fills, price gaps, latency between signal detection and mirror order submission, and variations in liquidity. The developer accepts no responsibility for any such differences or for any losses arising from them.

No Warranty of Availability

The developer provides no guarantee of continued availability, maintenance, or support. The software may be discontinued, modified, or become incompatible with future versions of NinjaTrader at any time without notice.

By using Q-My-Trade you confirm that you have read, understood, and agreed to all terms above. Trading involves substantial risk of loss. Past performance does not guarantee future results. Only trade with capital you can afford to lose.

1. Overview

What is Q-My-Trade?

Q-My-Trade V2 is a NinjaTrader 8 AddOn and Strategy that automatically copies and rotates trades across unlimited accounts. Trades from your signal account are mirrored in real time, you control how many accounts trade at once, in what order, with what contract sizes, and under what P&L limits.

V2 introduces a hierarchical queue structure with Master Groups, Sub-Groups, and unlimited accounts, fully event-driven trade detection, and two operating modes per sub-group.

Operating Modes

Each Sub-Group has its own mode. A single master can mix both modes across multiple sub-groups.

Mode	Description
ROTATE	One account trade per signal. After each trade closes the queue advances to the next account in sequence. Ideal for funded accounts with consistency rules.

Mode	Description
COPY ALL	Every eligible account in the sub-group trades simultaneously on each signal. Ideal for evaluation accounts where you want to maximise the number of passing attempts per trade.

- Q-My-Trade V2 is fully event-driven. Trades are mirrored within milliseconds of the signal fill — not on the next price tick. This means fast reversals, scale-ins, and partial closes are all captured and copied accurately.

2. Important Notices

ALWAYS-ON ARCHITECTURE

Q-My-Trade V2 starts automatically when the strategy is applied to a chart. There is no START button — copying begins the moment the strategy loads and stops when it is disabled. Apply the strategy at the start of your session before your signal strategy takes any trades.

WIN/LOSS LIMITS ARE NOT KILL SWITCHES

Max Win and Max Loss limits are ROTATION and COPY CONTROLS ONLY. They control whether the QMT skips an account after a trade closes. They do NOT close open positions, prevent losses beyond configured thresholds, send instructions to your broker, interact with your prop firm's risk system, or constitute capital protection of any kind. **Always maintain independent risk controls.**

If an account hits its Max Loss limit mid-trade, the current trade completes normally. The account is then skipped on the next signal only. The limit badge persists until a new trading day or until you click Reset All.

3. The Control Panel

Opening the Panel

Open from the NT8 Control Centre: Tools → Q-My-Trade

Header & Controls

Element	Description
SAVE	Saves the current queue configuration to the default config file.
SAVE AS	Saves the current queue configuration to a named file.
LOAD CONFIG	Loads a previously saved queue configuration.
RESET ALL	Clears all P&L, trade stats, and result badges. Resets rotation to account #1. Works whether the strategy is enabled or disabled. Does not affect open positions or active trade state.
? (Help)	Opens the built-in Help & FAQ window with quick reference information.
Licence Status	<p>Licence Status Displayed in the top right of the panel header. Shows the current activation state of your Q-My-Trade installation.</p> <ul style="list-style-type: none"> ✓ LICENSED (teal) — your licence key has been validated. No action required. TRIAL — X days (gold) — you are on a free trial with the number of days remaining shown. Click to open the activation dialog and enter a licence key at any time. ACTIVATE (red) — your trial has expired or no licence has been found. Click to open the activation dialog and enter your licence key.

Stats Bar

The stats bar displays aggregate totals across all master groups for the current session.

Element	Description
TOTAL TRADES	Total trades closed this session across all queue accounts.
WINS	Trades closed in profit.
LOSSES	Trades closed at a loss.
WIN RATE	Percentage of winning trades (Wins ÷ Total Trades).

Rotation Queue

The queue displays all Master Groups and their Sub-Groups. Each row shows an account with its status, P&L, limits, and quantity.

Element	Description
---------	-------------

#	Position in the sub-group queue.
ACCOUNT NAME	The NinjaTrader account name.
STATUS	Current account status badge. See Section 8 for full reference.
P&L	Cumulative realised P&L for this account since the strategy was loaded or last reset. Persists across strategy reloads — resets only on a new trading day or via Reset All.
MAX WIN (\$)	Profit target. Account is skipped once reached. Set to 0 for no limit.
MAX LOSS (\$)	Loss limit. Account is skipped once exceeded. Set to 0 for no limit.
Mirror Qty	Checkbox and quantity field. See Section 6 — Contract Size.
SKIP	Manually exclude this account from rotation.

Settings Panel

The Settings panel on the right side of the queue window provides global limit controls.

Setting	Description
Signal Account	Dropdown — select the account your signal strategy trades on. Set per Master Group.
CHART	Set this to match the instrument on the chart where the Q-My-Trade strategy is loaded. In multi-master setups this links each master to its correct chart instance. A mismatch warning popup will appear on strategy load if this is wrong.
Max Win (\$) per account	Global win target — applied to all accounts via Apply To All Accounts. Set to 0 for no limit.
Max Loss (\$) per account	Global loss limit — applied to all accounts via Apply To All Accounts. Set to 0 for no limit.
Mirror signal account's contract size	Global contract size mode toggle — see Section 6.
Fixed Qty (contracts)	Global fixed quantity — applied to all accounts via Apply To All Accounts.
APPLY TO ALL ACCOUNTS	Applies global limits and quantity to every account across all sub-groups. Caps are re-evaluated immediately.

4. Account Management

Master Groups

Each Master Group watches one signal account and manages its own set of sub-groups and accounts independently. Multiple masters run simultaneously — use one master per signal strategy or per instrument.

- Click MANAGE QUEUE → ADD MASTER to create a new master group.
- Assign a signal account using the Signal Account dropdown in the master header.
- Each master has its own Daily Reset setting, accessible in the signal account dropdown area.
- Masters can be reordered by dragging the ≡ handle on the master header row.

Sub-Groups

Sub-Groups sit inside a master group and each has its own operating mode. A master can have multiple sub-groups in any combination of ROTATE and COPY ALL modes.

- Click SUB-GROUPS → ADD SUB-GROUP within a master to add a sub-group.
- Set the mode (ROTATE or COPY ALL) using the mode button on the sub-group header.
- Sub-groups process in sequence within a master — Sub-Group 1 completes a full cycle through all its accounts before Sub-Group 2 becomes active. When all sub-groups have cycled, rotation wraps back to Sub-Group 1. Each sub-group operates independently with its own mode (ROTATE or COPY ALL) and its own account pool.
- Sub-groups can be reordered by dragging the ≡ handle on the sub-group header row or moved between master groups by dropping onto a different master header.

Managing Accounts

- Click ACCOUNTS → within a sub-group to add accounts to that sub-group.
- Tick accounts to add, untick to remove. Click UPDATE to apply.
- Accounts already in the sub-group are pre-ticked. Limits are preserved through a refresh.
- **DO NOT** add your signal account to any rotation queue. Q-My-Trade V2 protects this automatically — the signal account is greyed out and blocked from being added to any sub-group.

Drag & Drop Reordering

- Locate the white ≡ handle on the far left of any row.
- Click and hold, then drag to the new position.
- Release to drop index numbers update automatically.
- The new order takes effect on the very next trade.
- Accounts can be moved between sub-groups by dropping onto a different sub-group header.

Skip / Un-Skip

- Click SKIP on any account row to exclude that account from rotation.
- Click UN-SKIP to return it to active rotation.

Skip All / Un-Skip All

Each sub-group header contains a SKIP ALL button that lets you skip or un-skip every account in that sub-group with a single click, without having to go through each account individually.

- Click **SKIP ALL** to exclude all accounts in the sub-group from rotation. Accounts that are already capped (WIN CAP or LOSS CAP) are not affected — they remain in their capped state.
- When all accounts are skipped the button changes to **UN-SKIP ALL**. Click it to return all accounts in the sub-group to active rotation at once.
- Un-skipping does not clear WIN CAP or LOSS CAP badges; use Reset All too clear caps.
- Accounts with WIN CAP or LOSS CAP badges are automatically skipped. They can be manually un-skipped to override the limit or cleared via Reset All.

- Skipping an account does not close any open position on that account.

5. Win / Loss Limits

ROTATION CONTROLS ONLY

Win and Loss limits control when the rotator skips an account. They do not close positions or prevent losses beyond configured thresholds. See Section 2 for the full notice.

How Limits Work

Each account tracks its cumulative realised P&L since the strategy was loaded or last reset. This accumulates across multiple trades on the same account within a session and persists across strategy reloads and disable/re-enable cycles during the same trading day.

Example: Account A has Max Win = \$300, Max Loss = \$200. Trade 1 closes at +\$180. Cumulative P&L = +\$180. No cap. Trade 2 closes at +\$140. Cumulative P&L = +\$320. WIN CAP triggered. Account A is skipped for the rest of the session.

Setting Limits

- Double-click the MAX WIN or MAX LOSS cell directly in the queue table to edit inline.
- Click the pencil icon on any row to open the per-account edit dialog.
- Use APPLY TO ALL ACCOUNTS in Settings to set the same values on every account at once.

■ Set to 0 for no limit. Changing limits re-evaluates caps immediately — if an account's current P&L already exceeds the new threshold, the cap is applied straight away.

Reset

When Daily Reset is enabled (per Master Group — set in the signal account dropdown area), at the start of each new trading session:

- Cumulative P&L for all accounts in that master resets to zero at the start of each new trading session.
- WIN CAP and LOSS CAP badges are cleared.
- Rotation index returns to account #1.

Reset All

The Reset All button in the panel header clears stats for all master groups at once, at any time:

- Clears P&L, WIN/LOSS badges, WIN CAP and LOSS CAP for all accounts.
- Resets total trades, wins, losses, and win rate to zero.
- Returns rotation to account #1 in every sub-group.
- Works whether the strategy is enabled or disabled.
- Does not affect open positions, active trade state, or account config.

6. Contract Size

Mirror Signal Qty

Each account has a Mirror Signal Qty checkbox that controls how its contract size is determined.

Mode	Behaviour
Mirror Signal Qty ON (checked)	The follower copies the exact contract size of each signal fill, including scale-ins and partial closes. If the signal trades 2 contracts, the follower trades 2.
Mirror Signal Qty OFF (unchecked)	The follower uses its own fixed Qty setting for every entry and scale-in, regardless of signal size. Partial closes scale proportionally to the follower's position size.

Example (Mirror Signal Qty OFF): Signal trades 1 contract. Follower Qty = 5. Signal scale-in of 1 → follower adds 5. Signal closes 1 → follower closes 5.

Setting Per Account

- Check or uncheck the Mirror Signal Qty checkbox on any account row.
- Double-click the Qty field or use the pencil icon to set the fixed quantity.
- Changes take effect on the next trade for that account.

Global Apply

- Enter the desired quantity in the Fixed Qty field in the Settings panel.
- Check or uncheck Mirror signal account's contract size as required.
- Click APPLY TO ALL ACCOUNTS to update every account in every sub-group.

■ Global Apply overwrites per-account Qty and Mirror Signal Qty values. Set individual overrides afterwards if accounts have different sizing requirements.

7. Mirror Mode

How It Works

Your strategy trades on a dedicated signal account. Q-My-Trade monitors it using a real-time order event listener and mirrors each trade to the eligible accounts in the queue the moment the signal fill is confirmed — no polling, no delay.

The following actions on the signal account are detected and copied automatically:

- Initial entries (Buy, Sell, SellShort, BuyToCover).
- Scale-ins — additional entries in the same direction. Each scale-in is mirrored proportionally.
- Partial closes — closing part of the position. Each partial close is mirrored proportionally.
- Full close — position going flat. All follower positions are closed immediately.
- Reversals — closing and re-entering in the opposite direction in the same tick.

Signal Account Setup

- Configure your strategy to trade on its designated signal account.
- In the Master Group header, select this account from the Signal Account dropdown.
- Do not add the signal account to any rotation queue.
- Add your follower accounts to the sub-groups.
- Apply the Q-My-Trade strategy to a chart before your signal strategy takes any trades.

APPLY STRATEGY BEFORE TRADING

P&L baselines for each follower account are snapped when the Q-My-Trade strategy loads. Apply it to a chart before your signal strategy enters any trades. Trades taken before the strategy loads are excluded from P&L tracking.

Trade Flow

Step	What happens
1	Your strategy opens a position on the signal account.
2	Q-My-Trade detects the fill event immediately (event-driven, not tick-based).
3	Mirror market orders are submitted to all eligible accounts, the ON DECK account in ROTATE mode, or all eligible accounts in COPY ALL mode, using each account's own Qty setting.
4	Active accounts show TRADE status.
5	Your strategy closes its position on the signal account.
6	Q-My-Trade detects the signal close and submits close orders to all follower accounts.
7	Follower accounts close. P&L is recorded and limits are checked per account.
8	In ROTATE mode, rotation advances to the next account. In COPY ALL mode, all accounts are ready for the next signal.

8. Rotation Behaviour

ROTATE Mode

One account trade per signal. After the trade closes, rotation advances to the next eligible (uncapped, unskipped) account in sequence. When all accounts in the sub-group have traded, the cycle wraps back to account #1.

COPY ALL Mode

All eligible accounts in the sub-group trade simultaneously on every signal. Capped or skipped accounts are excluded. When the trade closes, all accounts process the close together. There is no sequential rotation, every signal fires on every eligible account.

Daily Reset

Enabled per Master Group. When turned on, at the start of each new trading session:

- P&L resets to zero for all accounts in that master.
- WIN CAP and LOSS CAP badges are cleared.
- Rotation returns to account #1 in all sub-groups.

■ Reset is set per Master Group in the signal account dropdown area. When disabled, limits and P&L persist across sessions until manually reset. Note: a 5pm automatic reset also runs daily for all masters, clearing P&L and cap badges at the end of each trading day regardless of this setting.

Status Badge Reference

Badge	Meaning
QUEUE	In the queue, awaiting its turn. Not currently active.
ON DECK	Next in line in ROTATE mode. Will receive the next mirror trade.
TRADE	A position is currently open on this account.
WIN	Last trade closed in profit. Cleared on next entry or Reset All.
LOSS	Last trade closed at a loss. Cleared on next entry or Reset All.
WIN CAP	Cumulative profit has reached Max Win. Account is skipped for the session.
LOSS CAP	Cumulative loss has exceeded Max Loss. Account is skipped for the session.
OFFLINE	Account has lost its broker connection. Automatically skipped until the connection is restored.

9. Installation

What's Included

File	Description
QMyTrade_v2.0.zip	The NT8 protected export package — import directly into NinjaTrader. Installs both the AddOn and Strategy automatically.

Requirements

- NinjaTrader 8 version 8.0.23 or later.
- Windows 10 or 11.
- An active data connection CQG, Rithmic, or any NT8-supported broker.
- At least two connected accounts, one signal account and one or more follower accounts.

Step 1 — Import into NinjaTrader

Step	Action
1	In NinjaTrader 8, go to Tools → Import NinjaScript Add-On.
2	Navigate to QMyTrade_v2.0.zip and select it.
3	Click Open — NinjaTrader will import and install both the AddOn and Strategy automatically.
4	Restart NinjaTrader when prompted.

- The protected package installs both the AddOn (control panel) and the Strategy (rotation engine) in a single import. No manual file copying or compilation is required.

Step 2 — Open the Panel

- In the NT8 Control Centre, click Tools in the menu bar.
- Select Q-My-Trade from the menu. The panel opens as a floating window.

Step 3 — Apply the Strategy

- Open any chart in NT8 (the instrument does not matter).
- Right-click the chart → Strategies → Add Strategy.
- Select Q-My-Trade from the list.
- The Account setting in the strategy dialog does not need to match your signal account — the signal account is configured inside the Q-My-Trade panel, not here. Leave Account set to the default or any connected account.
- Click OK. The strategy loads and Q-My-Trade begins watching the signal account immediately.

Step 4 — First Time Setup

Step	Action
1	Click MANAGE QUEUE → ADD MASTER . A new master group appears in the queue.
2	Select your signal account from the Signal Account dropdown in the master header.
3	Add a sub-group: click SUB-GROUPS → ADD SUB-GROUP . Choose ROTATE or COPY ALL .
4	Add follower accounts: click ACCOUNTS → within the sub-group. Tick accounts, click UPDATE .
5	Set Max Win , Max Loss , and Qty in Settings . Click APPLY TO ALL ACCOUNTS .
6	Click SAVE to save your configuration.
7	Verify all accounts show QUEUE status. You are ready to trade.

Troubleshooting

Problem	Solution
Q-My-Trade not in Tools menu	Q-My-Trade is not installed. Re-import the QMyTrade_v2.0.zip package via Tools → Import NinjaScript Add-On .
Strategy not found when adding to chart	Strategy not installed. Re-import the QMyTrade_v2.0.zip package via Tools → Import NinjaScript Add-On .
No accounts in Signal Account dropdown	No accounts are connected to NinjaTrader. Connect your broker feed first.
'v2.0 loaded' not appearing in output	Strategy failed to load. Try removing the strategy from the chart and re-adding it.
Strategy won't re-enable	NinjaTrader limits strategy restarts to 4 in 5 minutes. Wait for 'v2.0 loaded' in the output log before disabling again.
P&L not updating	Ensure the Q-My-Trade strategy is applied to a chart and loaded before trading begins. If the ACTIVATE badge is red in the panel header, click it to enter your licence key before trading.

10. Tips & Best Practices

Session Workflow — Follow This Every Day

Step	Action
1	Open NinjaTrader. Connect your accounts.
2	Open Q-My-Trade from Tools menu.
3	Your queue loads automatically from the last saved config. Click LOAD CONFIG only if you need to switch to a different saved configuration.
4	Open the Q-My-Trade panel (Tools → Q-My-Trade) before enabling your signal strategy. Then open a chart and apply the Q-My-Trade strategy to it. The Account setting in the strategy dialog can be left as default.
5	Confirm 'v2.0 loaded' appears in the NT8 output log — this confirms the strategy is active and watching your signal account.
6	Verify all accounts show QUEUE status and P&L is at expected values.
7	Enable your signal strategy. Copying begins automatically.

ORDER MATTERS

Always apply the Q-My-Trade strategy to a chart BEFORE enabling your signal strategy. P&L baselines are snapped at strategy load — trades taken before it loads will not be tracked correctly.

Prop Firm Compliance

- Verify firm rules first, some prop firms prohibit or restrict automated trading tools. Confirm compliance before live use.
- Q-My-Trade is a tool, not a risk manager, it does not enforce your firm's rules, close positions, or interact with your broker's risk system.
- Always use your firm's native risk controls, rely on your prop firm's platform and your signal strategy's own stops for capital protection.
- Win/Loss limits control rotation only, when an account hits a cap, Q-My-Trade stops routing trades to it. It does NOT close positions or prevent further losses on that account.
- Think of limits as routing rules e.g. set Max Loss to \$200 to stop routing new trades to an account that has lost \$200 that day.
- **One Account Per Master Group** Each follower account can only belong to one Master Group at a time. This is intentional. If the same account appeared in two Master Groups simultaneously, both master groups could attempt to open positions on that account at the same time creating conflicting trades, hedged positions or duplicate entries and on a prop firm account that could trigger rule violations. Q-My-Trade prevents this by design to keep your accounts safe.
- **Cross-instrument hedging:** Running two master groups with signals trading correlated instruments in opposite directions (e.g. long NQ on Master 1 and short ES on Master 2) may be considered a hedging violation by your prop firm. Q-My-Trade has no way of detecting cross-instrument correlation. This is entirely the trader's responsibility to manage.

General Tips

- The signal account must NOT be in any rotation queue.
- SAVE your config after any changes to the queue — it is not saved automatically.
- RESET ALL clears P&L and stats and returns rotation to account #1 without restarting the strategy.
- Drag-and-drop reordering takes effect immediately on the next trade.
- APPLY TO ALL re-evaluates caps immediately — if an account already exceeds the new threshold, it is capped straight away.
- Set Qty per account to match each account's funding level and prop firm sizing rules.
- Multiple Master Groups can run simultaneously, each with their own signal account.

Known Limitations

STRATEGY RESTART LIMIT

NinjaTrader limits strategy restarts to 4 in 5 minutes. If you disable and re-enable the strategy rapidly, NT8 may block further restarts temporarily. Wait for the 'v2.0 loaded' message before disabling again.

ALWAYS-IN STRATEGIES

Signal strategies that reverse by placing two separate orders (close + new entry) rather than a single NT8 reverse order may occasionally result in some follower accounts receiving a sweep-managed reversal rather than a strategy copy when account fills arrive at different speeds. The NT8 Reverse button in manual trading is not affected.

P&L DIFFERENCES

Differences between signal and follower account P&L are normal and expected. They arise from execution latency, slippage, and commission differences. See Disclaimer for full details.

HIGH FREQUENCY TRADING

Q-My-Trade is designed and tested for standard trading frequencies. Strategies that fire multiple trades per second during extreme volatility may produce unexpected behaviour. Q-My-Trade is not recommended for sub-second high-frequency strategies in live trading conditions.
